

# Exploring how Humans Interact with Nature

Kaisal Shah

# Brief Statement

Throughout my portfolio, I explore ideas about how humans interact with nature. Nature is the basis for everything that we are and everything that we do, so this theme intersects many different areas such as design, medicine, sustainability, and research. The works are inspired by medicine, science, architecture, urbanization, and more. A few are based on articles or science research studies, and I enjoyed combining my interest in research with art to consider how to depict and disseminate complex information. I experimented with many different mediums and processes throughout the portfolio which allowed me to play with different subjects and concepts.

## The Use of Stem Cell Therapy to Reverse Opioid Tolerance
